

DELISS'HERB

LONG TERM GRASS MIXTURE

BENEFITS

OPTIMAL APPETITE

- All species that make up **DELISS'HERB** are known for their excellent appetites.
- Highly appreciated by animals, their food complementarity remains beneficial throughout the production cycle and allows high animal performance.

EXCELLENT HAY

- **DELISS'HERB** is suitable for mowing and grazing.
- Mainly composed of diploid varieties and easy-to-dry species (timothy), **DELISS'HERB** is easily suitable for drying. It offers a complete, balanced and very rich hay intended for the most demanding animals.

IDENTITY CARD

KIND OF MIX

 Grass + Clover

DURATION

 More than 4 years

CULTURE TIPS

- Grazing begins before the 17 cm stage, it stops before the cover is reduced to 5 cm. For rapid regrowth, do not consume more than 50% of the height of the canopy.
- Mow at least 7 cm above the ground, Alternating grazing-mowing-grazing helps to better manage the early growth of the grass and the plants causing the refusals.

USES

USES			POSITIONING

COMPONENTS

SPECIES/VARIETIES		CHARACTERISTICS
% in weight	% in number of plants	
PERENNIAL RAYGRASS 2N		Intermediate variety. Increase the dry matter content of the forage to make quality hay and increase ingestion. Trampling resistant.
40 %	20 %	
PERENNIAL RAYGRASS 4N		Late flowering. High rust resistance to make the meadow very palatable.
26 %	19 %	
MEADOW FESCUE		Perform in all kind of soil with great feed value.
16 %	10 %	
TIMOTHY		Improve the palatability of the meadow and productivity.
8 %	28 %	
WHITE CLOVER		Ensure protein content of the pasture and increase the quality of the forage.
10 %	23 %
